

princity

Web based (SaaS) Managed Print Services

SaaS solution designed to manage a fleet of printing devices using cloud-based servers and a set of data collection agents installed within the end customer's network. Through a web browser, customers can monitor page counters, device status, and supply levels in real time. An on-premise version is also available for customers that do not allow cloud connectivity.

[30-Days Free Trial](#)

Key Features

Real-time alerts and notifications for consumables, errors, and critical events.

Real-time monitoring of **consumable levels**.

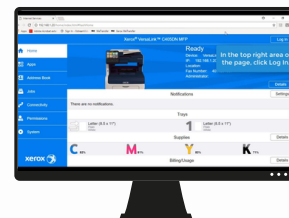

Customizable reports, automated scheduling, and integration with **PaperCut**.

Helpdesk module to log, manage, and track service tickets.

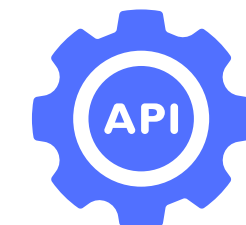

Unlimited users and role-based profiles.

Access the printer's **web interface** directly from the platform.

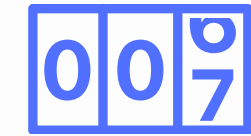

Automatic visibility and real-time updates of **on-site consumables inventory** at the customer location.

Seamless integration through **API, CSV, or webhooks**.

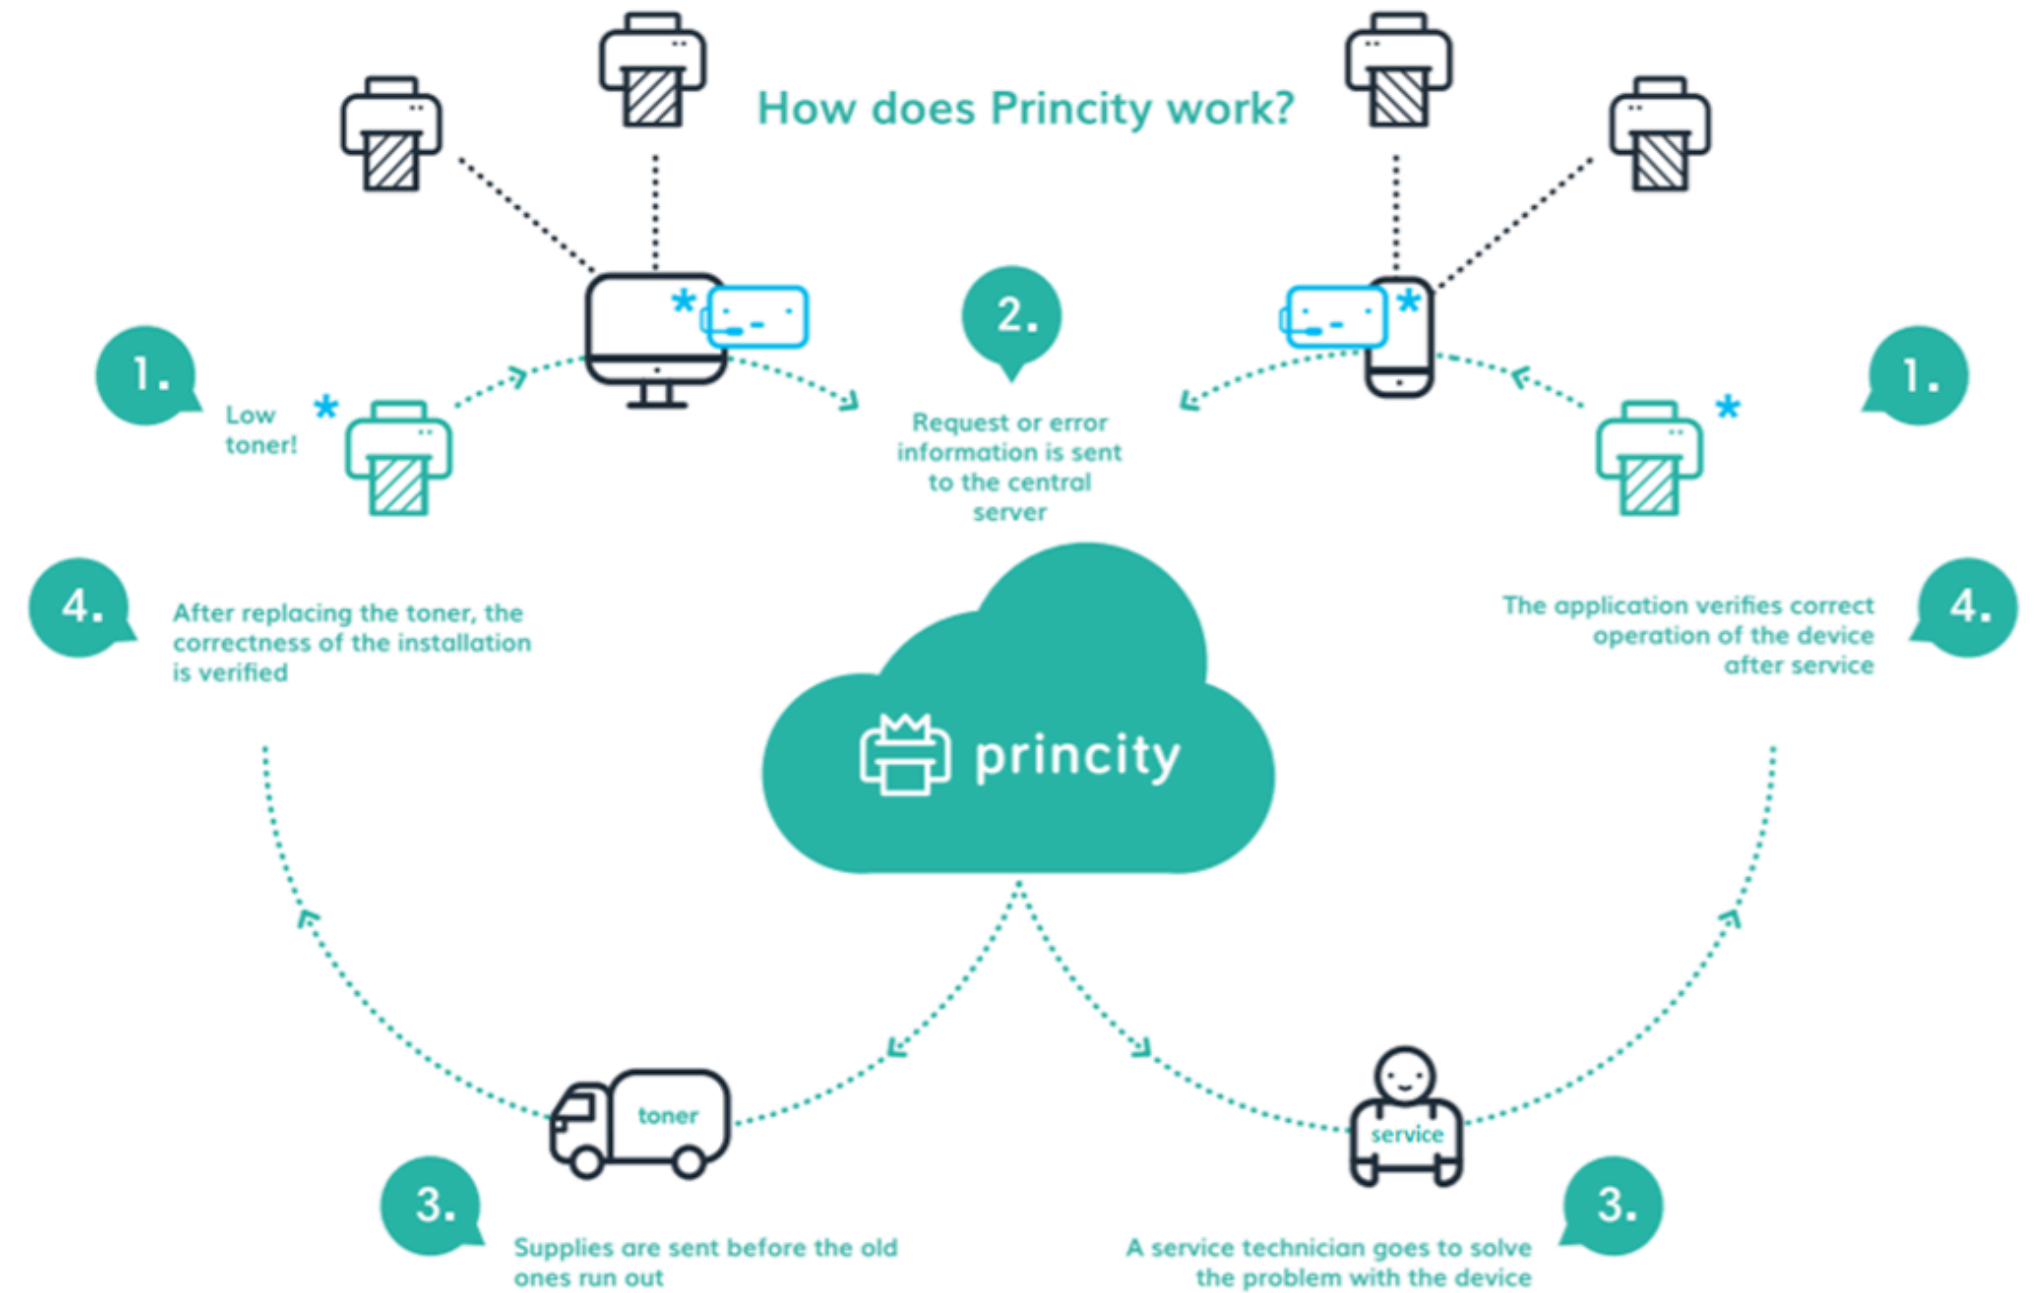

Web-based solution (on-premise option). Multi-brand / Multi-platform compatible.

Black, color, and scan page **counters**.

Architecture Management Lifecycle

Princity Core Architecture

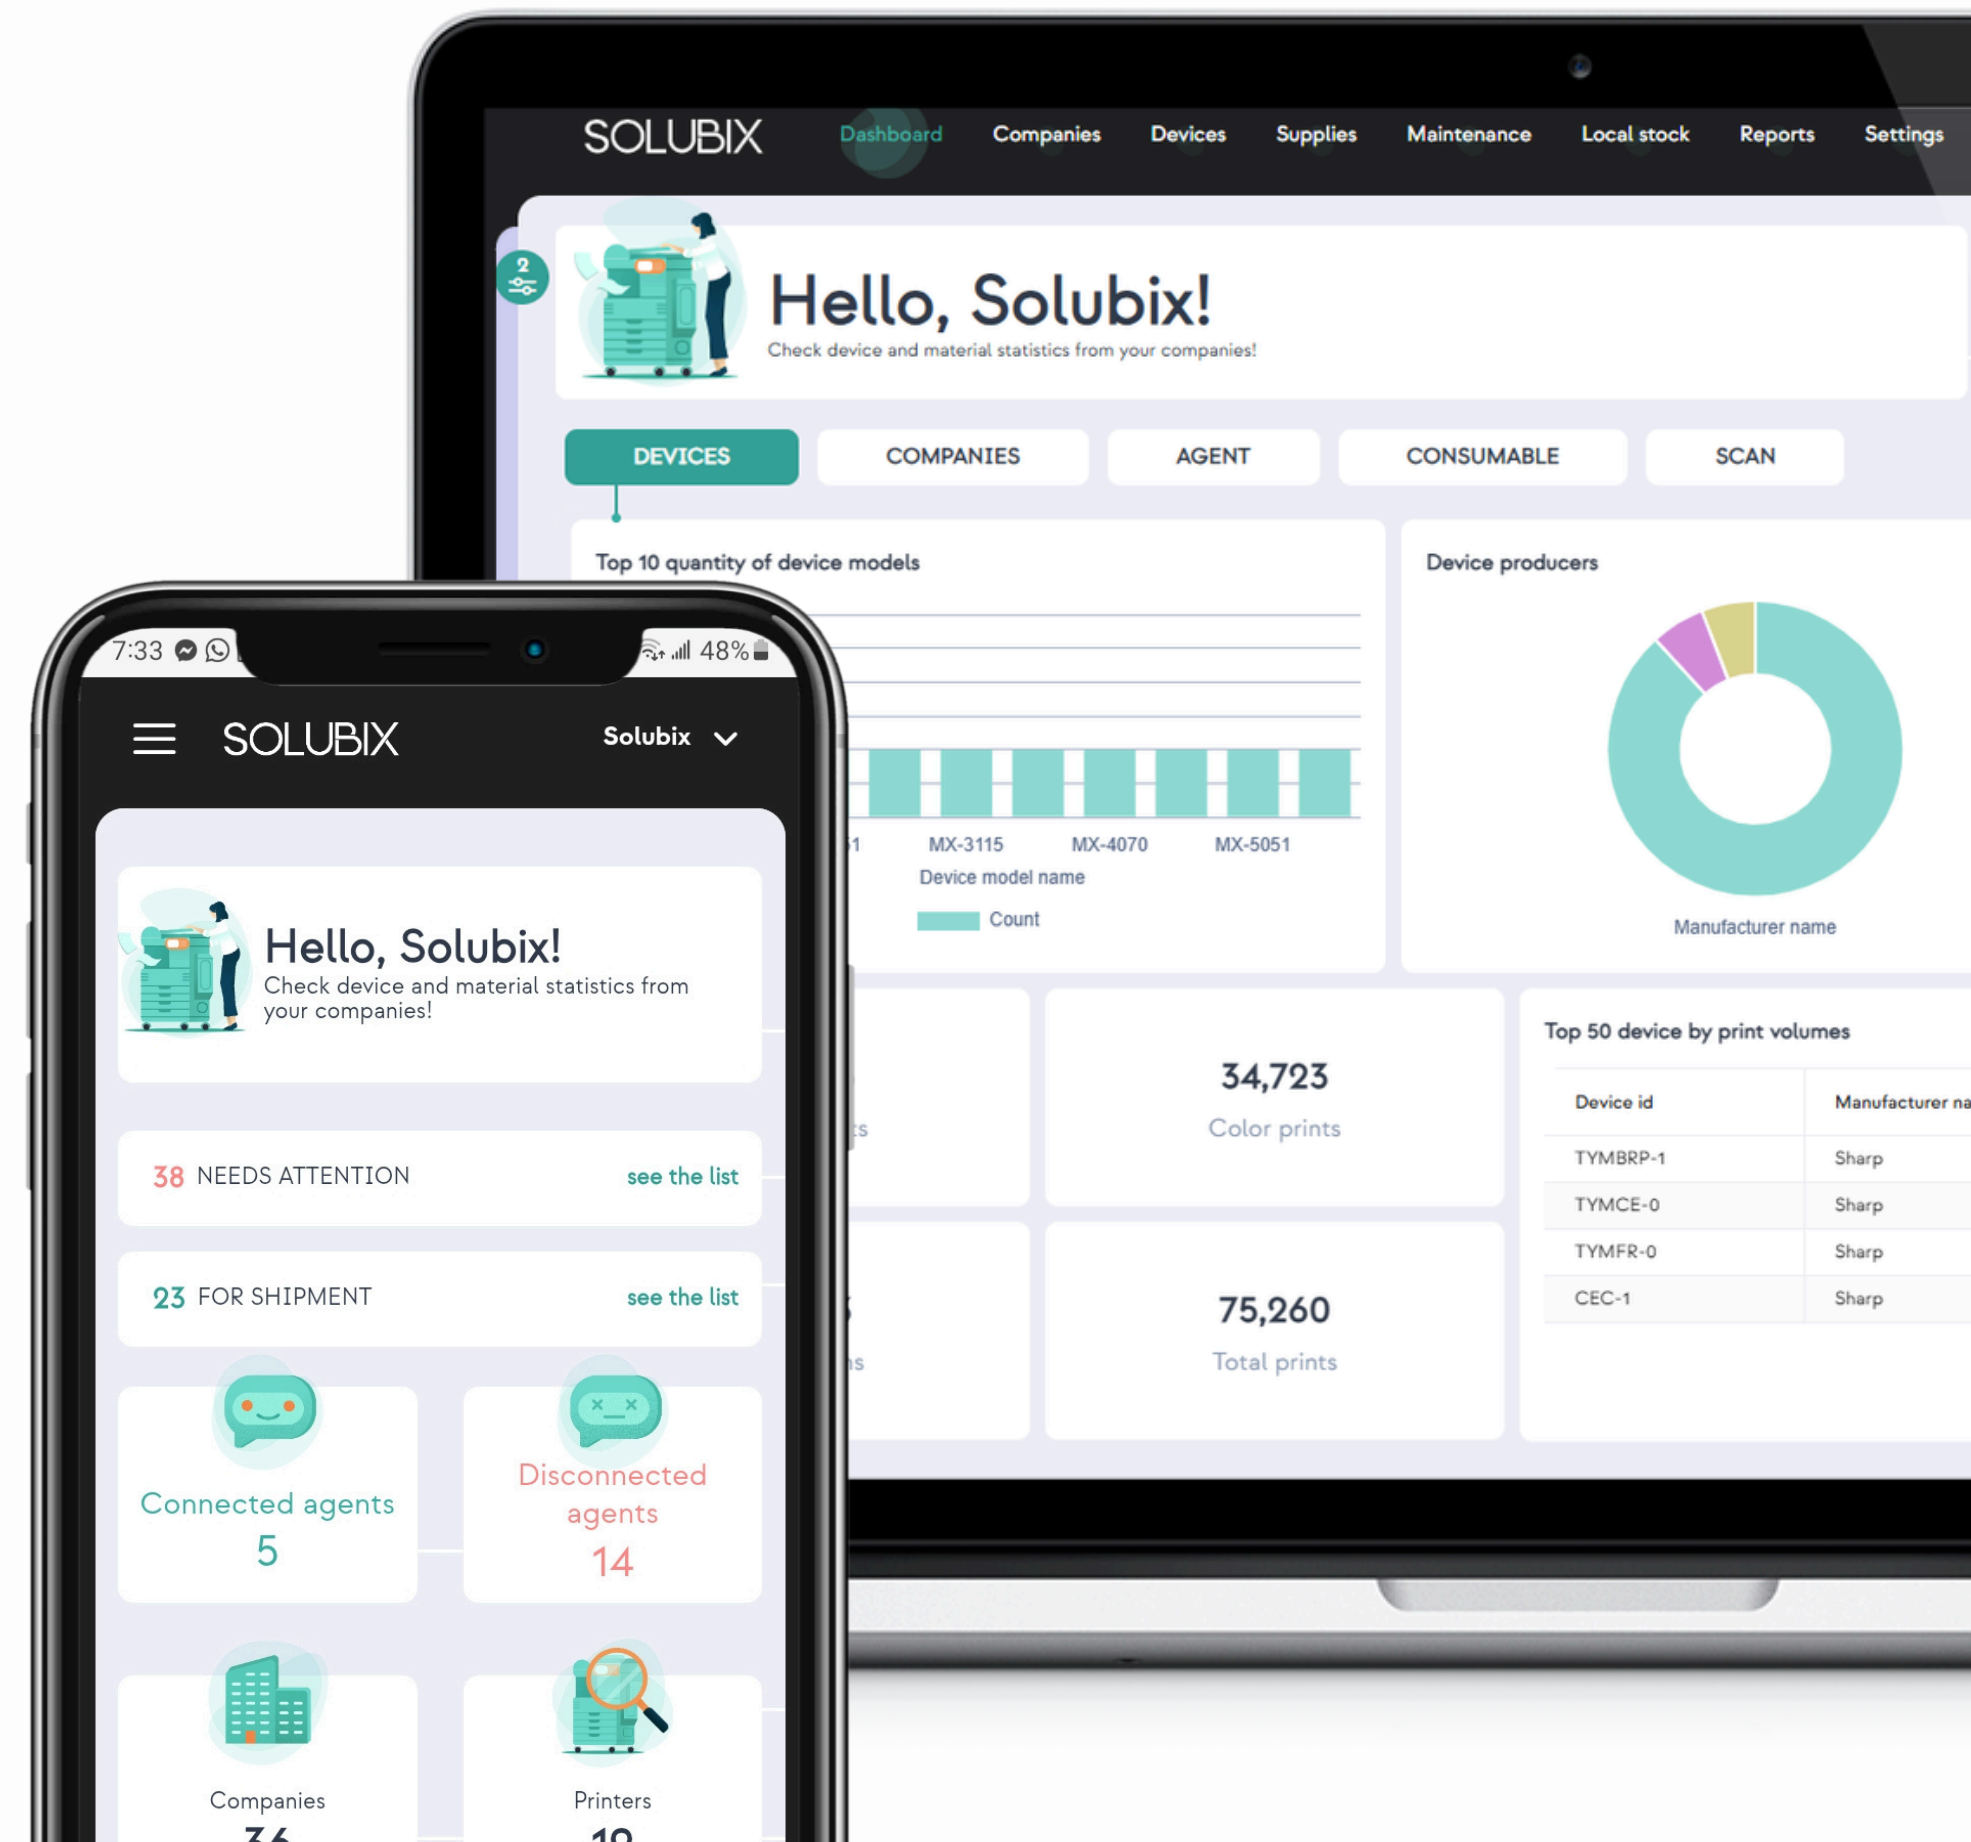

Princity Cloud – Application server hosted on the Microsoft Azure platform.

Princity Monitor – A lightweight client installed on the customer's network, on a network-connected machine. The Monitor application discovers printers on the network and checks their status on a recurring basis.

Web Interface – Browser-based console used to manage devices.

Access from any device.

Princity is a 100% web-based platform, accessible from any browser on a computer or mobile device. Users can access their portal at any time, without the need to install applications, to monitor their fleet, review alerts, and access real-time information.

Integration and Compatibility

Advanced integration with leading market brands, providing broad technology compatibility and seamless connectivity across multiple environments and business systems.

Webhooks

CSV

USB

Integration with leading market brands.

Pricing Model

Subscription

Licensing based on active devices (Unlimited users).
